WE HELP DIB SUPPLIERS

Prepare for CMMC

Not only will we help you meet compliance requirements, but we’ll establish your cutting-edge cybersecurity program in accordance with the National Institute of Standards and Technology (NIST) Cybersecurity Framework — Resulting in your ability to defend against ransomware and other cyber attacks that can cause significant downtime, or worse yet, leave your business unable to function.

Our CMMC Readiness Process

Our readiness process has been streamlined to help DIB suppliers meet compliance requirements fast and for less cost than other solutions on the market today. We can help you at every stage of the process including:

**GAP ASSESSMENTS:** The first step in the process is assessing current security program controls against the required CMMC Level. For example, for CMMC Level 2, we will assess your current controls against NIST 800-171r2. This step identifies gaps and provides detailed recommendations that we will use for remediation.

**SSP AND POA&M DEVELOPMENT:**
Our team creates two required documents based on the DoD’s Interim Rule: The Systems Security Plan (SSP) and Plan-of-Action & Milestones (POA&M).
**We Are Registered CMMC Practitioners**

Our Registered Practitioners (RP’s) will provide the required level of CMMC knowledge to successfully help your organization prepare for formal CMMC audits. Using RP’s ensures you get the job done right and for less time and cost than hiring an inexperienced service provider.

**We’re Here to Help**

For small and medium DIB Suppliers who lack cybersecurity knowledge and resources, preparing for CMMC can seem like an impossible task. Companies outsource to Brightline because we provide a team that helps them meet compliance faster and for less cost than doing it themselves.

**Ready to Get Started?**

Contact us at (248) 886-0248 for a consultation with our CMMC experts. We’re excited to walk you through the process, costs and address your questions.
